Abstracts

According to our (Global Info Research) latest study, the global Ziner Diode Array market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

Ziner diodes not only allow current to flow from the anode to the cathode, but also back when the Ziner voltage is reached. This type of device can be used as a voltage reference and to adjust the voltage on small circuits. Ziner diode networks or arrays are devices consisting of two or more diodes encapsulated in a single sheet. These diodes can be isolated from each other or connected to a common anode or cathode circuit type.
