Abstracts

Zink printing is a technology developed by Zink imaging, which makes it possible to produce full-color digital images without ink cartridges, ribbons, or toners. Colors appear on the special Zink paper with the help of thermal paper. Some of the key advantages of Zink printing over traditional printing are that the printing method is quick and does not require ink.

According to our (Global Info Research) latest study, the global Zink Printing market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Based on functionality, the ZINK printing market is subsegmented into compact photo printer and camera with printer segment. Enhanced security provided for ZINK printers and a user-friendly interface that is simple to understand are some of the major factors boosting the compact photo printer subsegment. In addition, the growth of the tourism industry worldwide has led an increase in the usage of instant cameras, and, with better alternatives available in the market in the form of ZINK printing technology, this is expected to lead to the growth of the camera with printer subsegment.
