Abstracts

The global Zip Surgical Skin Closure market size is expected to reach \$ 274 million by 2032, rising at a market growth of 7.6% CAGR during the forecast period (2026-2032).

In 2025, global Zip Surgical Skin Closure production reached approximately 3,120 K units, with an average global market price of around 50 US\$/unit.

Zip Surgical Skin Closure is a non-invasive wound closure device designed to approximate and secure the edges of surgical incisions or traumatic lacerations without using traditional sutures or staples. It usually consists of adhesive strips placed on both sides of the wound and a zip-tie-like adjustable bridge structure that allows clinicians to pull the wound edges together with controlled tension. By avoiding needle punctures, it can reduce additional skin trauma, simplify closure procedures, improve patient comfort, support consistent wound-edge alignment, and enable easier postoperative inspection or removal compared with conventional closure methods.

Demand for Zip Surgical Skin Closure is mainly driven by the growth of minimally invasive and patient-friendly wound care, rising outpatient and ambulatory surgeries, higher cosmetic expectations, and the need to reduce closure time in operating rooms, emergency departments, urgent-care centers, and home-care settings. The product has business opportunities as an alternative or supplement to sutures, staples, and skin glue, especially in orthopedics, cardiovascular surgery, general surgery, cesarean section, trauma care, and cosmetic-sensitive procedures. Suppliers can gain advantage through stronger adhesive performance, adjustable tension control, breathable and hypoallergenic materials, sterile packaging, broader incision-length coverage, clinical evidence for scar reduction and infection prevention, and hospital purchasing channels that support conversion from traditional closure consumables.

This report studies the global Zip Surgical Skin Closure production, demand, key manufacturers, and key regions.
