Zirconia Ceramic Block for Dental Prosthetics is a high-strength, durable material used in the production of dental restorations such as crowns, bridges, and dentures. Made from zirconium oxide (ZrO₂), it is processed into blocks that are then shaped and customized for dental applications using CAD/CAM technology. Zirconia ceramic blocks are known for their excellent mechanical properties, including high fracture toughness, wear resistance, and biocompatibility, making them ideal for both functional and aesthetic dental restorations. Additionally, zirconia's natural translucency allows for a lifelike appearance, making it a preferred choice for both anterior and posterior restorations.
