Zirconia ceramic nozzles are used in many industries. It uses zirconia with good wear resistance and corrosion resistance as the base material, and is processed through multiple processes such as grinding, milling, and polishing. It has a longer life than metal nozzles. Service life; the surface of the product adopts a polishing process, which can greatly increase the roughness of the inner wall of the nozzle, effectively reducing the resistance when the high-pressure liquid flows through, so that the fluid can be ejected more efficiently.
