Abstracts

The global Zirconia Dental Restorations Material market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Sintered zirconia is hard and therefore difficult to fabricate. For that reason, zirconia crowns and bridge restorations are made from a pre-sintered zirconia disc, which shrinks only about 21%, using a computer-aided design and computer-aided manufacturing (CAD/CAM) system. The fabricated zirconia dental appliance is then sintered to ensure its hardness. Zirconia Dental Material in this report refers to zirconia CAD/CAM blocks and Discs.

This report studies the global Zirconia Dental Restorations Material production, demand, key manufacturers, and key regions.
