Zirconia implant abutment is an artificial tooth framework used in dental implant surgery. It is usually made of high-strength ceramic material zirconia, which has excellent biocompatibility and mechanical strength. The implant abutment is threaded into the artificial implant, and the denture is secured to the abutment by set screws. Because zirconia has high biocompatibility and anti-corrosion properties, zirconia implant abutments have been widely used in the field of oral implantology, and have shown good long-term stability and reliability in clinical practice.
