Abstracts

The global Zirconium-Aluminium Alloy market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Zirconium-Aluminium Alloys are solid solutions of zirconium or other metals. Zirconium has a very low thermal neutron absorption cross section, high hardness, ductility and corrosion resistance. One of the main uses of zirconium alloys is in nuclear technology, as cladding for fuel rods in nuclear reactors, particularly water reactors. The typical composition of nuclear grade zirconium alloys is over 95% by weight zirconium and less than 2% tin, niobium, iron, chromium, nickel and other metals, which are added to improve mechanical properties and corrosion resistance.

This report studies the global Zirconium-Aluminium Alloy production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Zirconium-Aluminium Alloy, and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2022 as the base year.
