Abstracts

According to our (Global Info Research) latest study, the global Zirconium Diboride (ZrB₂) market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

Zirconium diboride (ZrB₂) is a highly covalent refractory ceramic material with a hexagonal crystal structure. ZrB₂ is an ultra-high temperature ceramic with a melting point of 3246°. Its relatively low density (approximately 6.09 g/cm³) and good high-temperature strength make it a candidate material for high-temperature aerospace applications such as hypersonic flight or rocket propulsion systems. In 2024, global zirconium diboride production reached approximately 1,000-3,000 tons, with an average global market price of around US\$ 50-150 per kg and gross margin of 40%-50%. The upstream of zirconium diboride powder cover supply of zirconium metal or zirconium oxide, boric compounds, elemental boron, and carbon sources. The midstream stage encompasses the main synthesis processes including carbothermal reduction, boron carbide reduction, and self-propagating high-temperature synthesis (SHS) followed by milling, classification, purification, and particle-size refinement.
