Abstracts

A white powder composed of particles of zirconium oxide, also known as zirconia, this material is used across a variety of fields for applications ranging from polishing semiconductors to producing artificial jewelry. Closely related to zirconium oxide powder is yttria-stabilized zirconium oxide, also known as yttria-stabilized zirconia or zirconia-yttria. This material is produced when some of the zirconium ions in zirconia are replaced with yttrium, stabilizing the cubic phase of the material. This, in turn, makes it possible to produce sintered zirconium oxide products and allows the material to conduct certain ions.
