Zirconium-vanadium-iron getter is a multi-metal alloy made of zirconium, vanadium, iron and other metals through a special process. It has the characteristic of obtaining excellent suction performance when activated at low temperatures, and is especially suitable for use in the temperature range of 300-500°C. The main function of zirconium vanadium iron getter is to remove harmful gases in the air, such as carbon monoxide, formaldehyde, benzene and other organic substances. Through the adsorption on its surface, these gas molecules are fixed on its active sites, thereby purifying the air. Effect.
