## Abstracts

According to our (Global Info Research) latest study, the global GPC HPLC Columns market size was valued at US\$ 138 million in 2024 and is forecast to a readjusted size of USD 211 million by 2031 with a CAGR of 6.3% during review period.

Gel Permeation Columns (GPC) are a type of high-performance liquid chromatography column used to separate molecules based on their size or molecular weight. In this technique, the stationary phase of the column is made up of porous materials, such as cross-linked polymers or silica. When a sample is injected, larger molecules elute first as they are excluded from the pores of the stationary phase, while smaller molecules take longer to elute as they enter and exit the pores. GPC is mainly used for the analysis of polymers, macromolecules, and biological samples where precise molecular size information is critical, offering a non-destructive and high-resolution separation.
