Grapple Shear is a forestry machine attachment that combines the functions of a grapple and a cutter, designed for handling trees and bulk timber. It is usually mounted on the arm of a crane, excavator or forestry machine, driven by a hydraulic system, and has the multi-function of grabbing, cutting and transporting trees. The main function of a grapple cutter is to grab and hold trees or branches, and then cut them with a built-in shearing tool. This equipment can efficiently and quickly complete tasks such as tree felling, pruning and transportation, and is particularly suitable for large-scale forestry operations.
