Abstracts

According to our (Global Info Research) latest study, the global Groundwater Passive Sampler market size was valued at US\$ 277 million in 2025 and is forecast to a readjusted size of US\$ 386 million by 2032 with a CAGR of 4.9% during review period.

Passive groundwater samplers are devices used for long-term deployment in groundwater monitoring wells to collect water samples through natural seepage or diffusion processes. Unlike active pump sampling, they require no external power and rely on diffusion membranes or adsorbent materials to collect representative samples within a set time. They solve the problems of traditional pump sampling, such as disturbing the aquifer, sample instability, and high cost, providing a low-cost, low-maintenance, long-term monitoring solution. The passive groundwater sampler market is growing rapidly, driven by environmental regulations, agricultural water quality monitoring, and mining and oil and gas pollution control. Future opportunities lie in intelligent and automated sampling systems. The average price of this product is approximately US\$1290 per unit, with global sales of approximately 208,000 units.
