Vaginitis is the most common infectious disease of the female reproductive system. It can be caused by *Candida albicans*, *Gardnerella*, *Trichomonas*, etc. The main clinical manifestations are itching of the vulva and vagina, burning sensation, increased vaginal discharge, or bloody leucorrhea, frequent urination, urgency, and pain when urinating. It has the characteristics of high incidence, recurrent attacks, and difficulty in cure. Three out of every four women of childbearing age will develop the disease at least once in their lifetime, and 40% to 50% will be repeatedly infected. Therefore, a fast and accurate detection method is of great significance to patients with vaginitis.
