Abstracts

According to our (Global Info Research) latest study, the global Handheld Degausser market size was valued at US\$ 255 million in 2024 and is forecast to a readjusted size of USD 326 million by 2031 with a CAGR of 3.6% during review period.

A handheld demagnetizer is a portable device used to eliminate the magnetism of an object. It is widely used in tools, mechanical parts, electronic components and other fields that require demagnetization. By generating an alternating magnetic field, a handheld demagnetizer can effectively eliminate the residual magnetism on the surface of an object, preventing problems such as equipment damage, reduced accuracy or metal shavings adsorption caused by magnetization. It is simple and flexible to operate, and is suitable for occasions that require rapid demagnetization, such as maintenance, testing and tool demagnetization on production lines.

Handheld demagnetizers are of great practical value in modern industry and maintenance, especially in eliminating residual magnetism from tools, mechanical parts, and electronic components. Their portability and ease of operation make them an essential tool for many workers and technicians, effectively improving work efficiency and preventing production or maintenance problems caused by magnetization. However, the effectiveness of handheld demagnetizers may be limited by the strength of the magnetic field and the environment in which they are used. Future technological improvements can further enhance their demagnetization efficiency and range, allowing them to play a greater role in more high-precision industries.
