The Meibomian Gland Thermal Pulsation Therapy Device is a new type of ophthalmic treatment device based on vector thermal pulsation technology. The handheld Meibomian Gland Thermal Pulsation Therapy Device combines the two physical treatments of hot compress fumigation and meibomian gland massage, using thermal pulsation. Technology, quickly and safely heats to the treatment temperature of 40~43?, moderately heats the eyelid tissue through the heating plate, melts the abnormal meibum blocking the orifice, and then gently squeezes the eyelid tissue to discharge the melted meibum through the orifice. , which can realize the integration of ester melting and ester discharge. This therapeutic device has the advantages of precision, comfort, and short treatment cycle, and has great application potential in the treatment of diseases such as MGD and dry eye syndrome.
