According to our (Global Info Research) latest study, the global Heat Temperature Plastic Containers market size was valued at US\$ 8329 million in 2024 and is forecast to a readjusted size of USD 11070 million by 2031 with a CAGR of 4.2% during review period.

Heat temperature plastic containers are containers made from polymeric materials that are designed to withstand continuous operating temperatures up to or exceeding 300°F without any negative impact on their mechanical properties.

Rigid containers have a relatively rigid shape and form. There is an increasing demand for rigid plastic containers in the food and beverage industry due to their durability and lightweight properties. These properties ensure food safety and a longer shelf life, and protect it from moisture, light and chemicals. Furthermore, due to its lightweight properties, it is an effective packaging material for storing and transporting food and beverages. Changing lifestyles and increasing consumer spending on packaged goods will increase the demand for rigid containers in the food and beverage industry. Online delivery of food & beverages, cosmetics, home care products, disinfectants and cleaners supports the growth of container manufacturers.
