According to our (Global Info Research) latest study, the global Helium-free Magnetocardiograph market size was valued at US\$ 14.7 million in 2024 and is forecast to a readjusted size of USD 25.7 million by 2031 with a CAGR of 8.4% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

The liquid helium-free magnetocardiograph is a new type of cardiac function detection device that uses highly sensitive sensors such as superconducting quantum interference devices (SQUIDs) or atomic magnetometers to accurately detect the weak magnetic field generated by cardiac electrical activity without the need for liquid helium cooling. Compared with traditional liquid helium cooling equipment, this instrument is more compact, portable and environmentally friendly, avoiding the problems of liquid helium resource shortage and high maintenance costs, and providing a new efficient and economical way for non-invasive detection and diagnosis of cardiovascular diseases.
