In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Heparin affinity media is a separation medium based on the specific binding ability of heparin molecules, which is used to separate and purify protein molecules that have specific adsorption effects on heparin molecules. Heparin affinity media uses agarose gel microspheres as a matrix, and fixes heparin molecules on the matrix through special chemical bonds and technologies. It has good affinity, high protein activity recovery rate, and good chemical stability. It is used for the separation and purification of a variety of biomacromolecules.
