Abstracts

According to our latest research, the global Heparin Anti-thrombogenic Coating market size will reach USD 1623 million in 2031, growing at a CAGR of 8.5% over the analysis period.

Heparin Anti-thrombogenic Coating is a specialized surface treatment applied to medical devices to reduce the risk of blood clot formation (thrombosis) during their use. By immobilizing heparin—a naturally occurring anticoagulant—onto device surfaces, this coating inhibits platelet activation and coagulation pathways, ensuring blood compatibility. It is commonly used on devices such as catheters, stents, heart valves, and extracorporeal circuits, enhancing their safety and functionality, particularly during prolonged contact with blood. This technology is critical in minimizing complications associated with medical implants and interventions in cardiovascular and other blood-contacting applications.
