Heparin Surface Modified Aspheric IOL is coated with a heparin layer on the surface of the intraocular lens. Aspheric IOLs are designed to correct for spherical aberration. The result is a lens that will provide better overall vision than traditional IOLs, especially at night. Modification of the surface of the intraocular lens with a layer of heparin may provide a more biocompatible surface. Heparin is a type of anticoagulant, which has an effect on the expression of adhesion molecules and matrix degrading enzymes.
