A Heparin Tube is a type of blood collection tube coated with heparin, an anticoagulant that prevents blood from clotting. These tubes are commonly used in clinical and laboratory settings where plasma samples are needed, as heparin preserves the blood in its fluid state, allowing for various types of analysis. There are typically two types of heparin tubes based on the form of heparin used: lithium heparin and sodium heparin. Heparin tubes are especially useful for plasma biochemical tests, blood gas analysis, and tests requiring the preservation of cell structures, such as certain hematology and cytogenetic tests. The anticoagulant in the tube binds to antithrombin, a natural inhibitor of clotting in blood, which halts the clotting cascade. This enables the collection of plasma for testing without interference from clotting factors that might otherwise alter test results.
