Hernia mesh fixation devices are medical tools used in surgical procedures to secure a mesh implant over a hernia. A hernia occurs when an internal part of the body pushes through a weakness in the muscle or surrounding tissue wall. To repair this, a surgical mesh is placed over or under the weakened area to provide support and prevent recurrence. The fixation devices, which can be sutures, tacks, or adhesives, are employed to keep the mesh in place and ensure it integrates properly with the surrounding tissue. These devices are critical for the success of the hernia repair surgery, providing stability and promoting healing.
