Abstracts

According to our (Global Info Research) latest study, the global High Density Calcium Silicate Boards market size was valued at US\$ 918 million in 2024 and is forecast to a readjusted size of USD 1143 million by 2031 with a CAGR of 3.2% during review period.

Calcium silicate board is made of siliceous materials (mainly composed of SiO₂, such as quartz powder, coal ash, diatomite, etc.), calcium materials (mainly CaO, such as lime, calcium carbide mud, cement, etc.), reinforced fibers, and other additives. According to a certain proportion of various compounds, use advanced producing technology of molding, pressure, high-temperature steaming and other special technical processing to made calcium silicate board.

High-density calcium silicate board is a high-performance fireproof, thermal and acoustic insulation material used in construction and industrial fields. It is made of inorganic materials such as calcium silicate, quartz sand, and cellulose fiber, and is hot-pressed at high temperature. This material has excellent physical properties and fire resistance, and is widely used in walls, ceilings, floors, chimneys, furnaces, and high-temperature equipment. Compared with ordinary calcium silicate board, high-density calcium silicate board has higher density, so it has higher strength and durability. High-density calcium silicate board is an excellent refractory material, which can maintain structural integrity in high-temperature environments and effectively prevent the spread of flames and high temperatures.
