Release film is mainly composed of substrate, base adhesive, and release agent. Plasma treatment, fluorine coating, or silicon release agent is applied to plastic film substrate to make it exhibit extremely light and stable release force for various organic pressure-sensitive adhesives. Release film has a wide range of applications, including being used as a laminated isolation film and protective film for flexible printed circuit boards (FPC), LED industry, raw material for polarizing films, protective layer for adhesive protective film products, punching consumables for die-cutting industry, and as a carrier for transferring the production and processing of multi-layer ceramic capacitors (MLCC) and laminated built-in antennas. It is widely used in the processing of various products, such as IT displays, mobile phones LCD/PDA? The home appliance manufacturing, anti-counterfeiting materials, semiconductors, automobiles, nameplates, ceramic wafer manufacturing, tape production, and die-cutting industries, among which the most important are the applications in MLCC processes.
