High-grade iron ore concentrate refers to the refined iron ore powder with a high iron content and a low gangue content after natural ore has been processed through crushing, grinding, beneficiation and other processes. Generally, it can be divided into two categories. One is magnetite concentrate with an iron grade higher than 69.5% and the content of silicon dioxide and other impurities less than 2.5%, which is mainly used for the production of sponge iron. The other is magnetite concentrate with an iron grade higher than 71.5% and the content of silicon dioxide and other impurities (acid-insoluble substances) less than 0.2% - 3%, which is mainly used in the fields of powder metallurgy and magnetic materials.
