## Abstracts

According to our (Global Info Research) latest study, the global High-power Ultrasonic Plastic Welding Machine market size was valued at US\$ 506 million in 2025 and is forecast to a readjusted size of US\$ 674 million by 2032 with a CAGR of 4.0% during review period.

A high-power ultrasonic plastic welding machine is an industrial assembly system that uses high-frequency mechanical vibration (typically ~20 kHz or above) combined with clamping force to generate localized frictional heat that softens or melts thermoplastic interfaces, enabling fast, clean and strong welds. The “high-power” designation refers to units with elevated output energy capable of welding larger or thicker plastic parts. Core components include a high-power ultrasonic generator, transducer, booster, robust horn, and servo/pneumatic press, integrated into high-throughput automated production lines in automotive, appliance, electronics, medical and other sectors.

Upstream includes power electronics & control, press/actuation and motion components, piezo-based transducers, and acoustic tooling (booster/horn, typically aluminum/titanium). Midstream consists of machine OEMs and integrators providing fixtures, process development/validation, software, and in-process monitoring. Downstream demand comes from automotive, consumer electronics, medical devices/consumables, packaging, and appliances.

In 2025, global high-power ultrasonic plastic welding machine production reached approximately 50 k units, with an average global market price is around \$10,000 per unit.
