According to our (Global Info Research) latest study, the global High Pressure Coriolis Mass Flowmeter market size was valued at US\$ 615 million in 2024 and is forecast to a readjusted size of USD 952 million by 2031 with a CAGR of 6.4% during review period.

A high-pressure Coriolis mass flowmeter is an advanced flow measurement device designed to accurately measure mass flow rate, density, and temperature of fluids or gases under extreme pressure conditions. By leveraging the Coriolis principle, the meter detects minute deflections in its vibrating flow tubes caused by the flow of fluid, providing precise, direct mass flow measurements independent of fluid density, viscosity, or temperature changes. These flowmeters are commonly used in high-pressure applications such as oil and gas production, chemical injection, hydraulic systems, and supercritical fluid processes. With their robust construction and ability to withstand pressures up to several thousand psi, they ensure reliable performance, efficiency, and real-time monitoring in demanding industrial environments.
