According to our (Global Info Research) latest study, the global High Profile Gastrostomy Tube market size was valued at US\$ 263 million in 2024 and is forecast to a readjusted size of USD 374 million by 2031 with a CAGR of 5.2% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

A High Profile Gastrostomy Tube (HPGT) is a feeding tube that is inserted into the stomach through the abdominal wall, but it has a larger external component compared to low-profile tubes. The higher profile design means the tube extends more prominently above the skin, which can make it easier to grip and manage during feeding and maintenance. HPGTs are typically used for individuals who require long-term enteral nutrition and need a durable, easy-to-access feeding solution. They are also often used when medical staff need to easily check or adjust the tube placement.

Fresenius Kabi, Cardinal Health and Nestle are the top 3 companies in global gastrostomy feeding tube (G-tube) market and account for about 40% of total market share. Geographically speaking, Americas holds about 35% of global market share, followed by APAC with about 30% share. In terms of type, low profile G-tube segment holds an important share of over 50%. In terms of application, over 60% of the gastrostomy feeding tube (G-tube) are for adult.
