The high-speed double-sided rotary tablet press is a basic equipment used to press various granular raw materials into round tablets and special-shaped tablets. It is especially suitable for mass production. Its structure is a double-pressure type, with two sets of charging devices and two sets of wheels, so that multiple sets of molds can be installed on the turntable at the same time, thereby improving production efficiency.

The working principle of the high-speed double-sided rotary tablet press mainly relies on the rotational motion of the rotary system to feed the material into the tablet pressing mechanism. During the rotation process, the material is squeezed and compressed to form the desired tablets or capsules. At the same time, the control system on the machine can accurately control various parameters during the tableting process, such as pressure, temperature and humidity, to ensure product quality.
