According to our (Global Info Research) latest study, the global High Temperature Silicone Multicore Cable market size was valued at US\$ 938 million in 2024 and is forecast to a readjusted size of USD 1215 million by 2031 with a CAGR of 3.8% during review period.

Silicone cables are characterized by their high temperature resistance up to +250°C combined with permanent flexibility. Due to the cross-linked molecular structure, silicone cables remain in their original shape even when exposed to temperature. Silicone cables are halogen-free on silicium basis with which the maintenance of function in case of fire can be reached. Heat-resistant silicone cables are used, for example, in metallurgical plants steel mills and rolling mills, for the internal wiring of lights or in glass and ceramics processing.

A high temperature silicone multicore cable is a type of cable designed for use in high-temperature environments. It features multiple cores and is manufactured using heat-resistant silicone rubber material. This cable is suitable for applications where signal or power transmission is required in high-temperature conditions, such as industrial manufacturing, furnace equipment, aerospace, and other fields. It can maintain stable performance and reliable transmission capabilities even under extreme heat.
