Silicone cables are characterized by their high temperature resistance up to +250°C combined with permanent flexibility. Silicone cables are halogen-free on silicium basis with which the maintenance of function in case of fire can be reached. These are single or multicore cable suitable for extreme temperature conditions. They find their application in steel industries, cement industries, glass industries, ship buildings, and aviation.

A high temperature silicone single core cable is a cable designed for use in high-temperature environments, constructed with heat-resistant silicone rubber material and featuring a single core structure. This cable is commonly used for signal transmission or power connections in high-temperature conditions and finds extensive applications in industrial sectors such as metallurgy, glass production, chemicals, and more. It can reliably transmit signals or power while maintaining stability.
