## Abstracts

According to our (Global Info Research) latest study, the global High Tungsten Copper Rod market size was valued at US\$ 367 million in 2024 and is forecast to a readjusted size of USD 551 million by 2031 with a CAGR of 6.0% during review period.

A high tungsten copper rod is an alloy rod mainly composed of tungsten and copper, with a relatively high tungsten content. Usually, the tungsten content in high tungsten copper rods can reach 60% - 90% or even higher. These rods are fabricated through powder metallurgy processes, which involve mixing high-purity tungsten powder and copper powder in a certain proportion, followed by processes like isostatic pressing, high-temperature sintering, and copper infiltration. High tungsten copper rods possess excellent electrical and thermal conductivity, high-temperature strength, good plasticity, and certain wear resistance. Due to their unique properties, they are widely used in various fields such as electrical engineering, electronics, aerospace, and mechanical manufacturing. For example, they are used to make electrodes and contacts in electrical equipment, heat-conducting components in high-temperature equipment in the electronics industry, and components that need to withstand high temperatures and pressures in the aerospace industry.
