## Abstracts

According to our (Global Info Research) latest study, the global Hockey Skate Mat market size was valued at US\$ 7.72 million in 2025 and is forecast to a readjusted size of US\$ 10.72 million by 2032 with a CAGR of 4.9% during review period.

In 2025, the global production of ice hockey skate mat is approximately 150,000 pieces, with an average selling price of approximately US\$50 per mat and a gross profit margin of approximately 40%. Single-line production capacity is approximately 2,000 mats per year. Ice hockey anti-slip mats are heavy-duty anti-slip mats primarily placed on the sidelines of ice hockey rinks, in locker rooms, and entrance areas. They are typically made of high-density rubber, PVC, or high-performance polymers. By providing a safe, non-slip, and highly protective transition surface, they perfectly solve the core pain points of the inconvenience and destructive potential of wearing ice skates on land, making them an indispensable auxiliary product in the ice sports field. The upstream supply chain mainly consists of the petrochemical industry, providing raw materials such as rubber, PVC, and TPR polymers. The midstream involves specialized manufacturing, processing raw materials into finished mats with high friction coefficients and durability through mold design, mixing, and pressing processes. The downstream supply chain reaches home users and commercial ice rinks through sporting goods retailers, ice rink equipment suppliers, and online platforms. Its core demand stems from the dual needs of downstream users for safety and asset protection: the product, with its strong anti-slip properties (providing a stable standing surface for users wearing ice skates to prevent falls) and durable materials (isolating ice skates from scratches and water stains on indoor and outdoor surfaces), becomes a safe buffer zone connecting ice sports and land spaces, and is a key product for improving the sports experience and maintaining facilities.
