According to our (Global Info Research) latest study, the global Human Plasma Derivative market size was valued at US\$ 36350 million in 2024 and is forecast to a readjusted size of USD 59300 million by 2031 with a CAGR of 7.3% during review period.

Human Plasma Derivative: These are medicinal products that are manufactured from human plasma, the liquid component of blood. Plasma contains important proteins, clotting factors, and antibodies that can be processed and concentrated to create products used in various medical treatments. PDPs are essential for treating conditions such as hemophilia, immune deficiencies, and certain autoimmune diseases.

Driver of the Human Plasma Derivative Market:

One of the main drivers of the Human Plasma Derivative market is the increasing prevalence of rare and chronic diseases, such as hemophilia, primary immunodeficiency disorders, and autoimmune diseases. These conditions require ongoing treatment with Human Plasma Derivative like clotting factors, immunoglobulins, and albumin. The growing awareness and diagnosis rates of such diseases, along with advancements in plasma collection and fractionation technologies, have contributed to a higher demand for these therapies. Additionally, increasing investments in healthcare infrastructure and government support in emerging markets are fueling market growth.

Challenge of the Human Plasma Derivative Market:

A key challenge in this market is the complex and costly process of plasma collection and product manufacturing. Human Plasma Derivative require large volumes of plasma, which can only be obtained through human donors. The stringent regulations surrounding plasma collection, donor screening, and testing to ensure safety make the process time-consuming and expensive. Furthermore, any disruption in plasma supply

chains, such as those caused by geopolitical issues or pandemics, can lead to shortages and impact treatment availability.

The outbreak of COVID-19 pandemic has led to decrease in number of blood donations and plasma collections, which hampers the market growth as it leads to shortage in raw material supply.

The classification of Human Plasma Derivative includes Immune Globulin, Coagulation Factor, Albumin and Other. In 2023, Immune Globulin accounted for a share of 51% in the global Human Plasma Derivative market.

North America is the largest consumption place, with a revenue market share nearly 40% in 2023. Following North America, Europe is the second largest consumption place with the revenue market share of 24 %; China is also an important sales region for the Human Plasma Derivative.
