Hydraulic orbital motors are compact, high-torque hydraulic motors widely used in industrial, agricultural, and construction equipment. These motors operate using a gerotor or roller stator design, where pressurized hydraulic fluid drives the rotor, producing smooth rotational motion with consistent torque, even at low speeds. Renowned for their efficiency, durability, and ability to handle high loads, hydraulic orbital motors are ideal for applications such as conveyor systems, agricultural machinery, winches, and wheel drives. Their robust construction and ability to function in harsh conditions make them a reliable choice for powering equipment in demanding environments.
