## Abstracts

According to our (Global Info Research) latest study, the global Hydraulic Steering Line Constant Running Pump market size was valued at US\$ 367 million in 2025 and is forecast to a readjusted size of US\$ 573 million by 2032 with a CAGR of 6.5% during review period.

In 2025, the global installation volume of new hydraulic steering line constant running pumps was approximately 228,000 units, with a unit price of USD 1,570 and a gross profit margin of 20%–31%. Hydraulic steering line constant running pumps are a type of fixed-displacement hydraulic pump assembly driven by a constant-speed motor (AC or DC) or diesel auxiliary power. They are used to provide constant oil pressure and stable flow in steering gears, winches, hoists, lifting mechanisms, and multi-way valve systems. A typical structure includes: an electric motor, a gear pump or piston pump assembly, an accumulator (0.75–2 L), pressure regulating valves and unloading valves, pressure and temperature sensors, a return oil filter assembly, a corrosion-resistant housing and base, and an NMEA/digital control interface. They generally have common parameters such as a flow rate of 4 L/min, pressure of 45–85 bar, input voltage of 12V/24V/AC220–440V, operating temperature of ?20~60 ?, and protection rating of IP66–IP68. Typical marine usage is: 1 set for 20–35 ft vessels; 1–2 sets for 35–55 ft cruising boats; and dual-pump redundancy for 60–90 ft private yachts. The upstream components consist of an aluminum alloy housing (6061/5083), a high-hardness gear/plunger pump core, a DC/AC motor, oil-resistant seals (NBR/FKM), a pressure sensor, and an accumulator; the downstream components include yacht manufacturers, fishing boat factories, commercial/official boat manufacturers, offshore workboat conversion companies, and marine equipment integrators.
