Implantable Drug-Eluting Balloon is a medical device used to treat narrowed or blocked blood vessels, particularly in coronary and peripheral arteries. The balloon is coated with a therapeutic drug that is released directly to the artery wall when the balloon inflates. This drug helps prevent restenosis, or re-narrowing of the artery, by inhibiting cell proliferation. Drug-eluting balloons are commonly used in minimally invasive procedures as an alternative to stents, especially in complex cases where stents may not be suitable.
