Induction Phone Wash is an innovative way to clean and sanitize phones using non-contact induction technology. It can effectively remove bacteria, viruses and other harmful substances on the surface of the phone by using ultraviolet light (UV-C) or other disinfection technologies. One of the development trends of inductive hand washing is intelligence and automation. Manufacturers are committed to designing intelligent sensing systems, through sensors and control technology, to automatically detect the placement and removal of mobile phones, and to automatically start and stop cleaning programs. Some inductive hand sanitizers also have an intelligent recognition function, which can automatically adjust the cleaning time and disinfection intensity according to the size and model of the mobile phone.
