## Abstracts

According to our (Global Info Research) latest study, the global Industrial Bisphenol F Type Epoxy Resin market size was valued at US\$ 203 million in 2025 and is forecast to a readjusted size of US\$ 292 million by 2032 with a CAGR of 5.7% during review period.

Industrial Bisphenol F type epoxy resin is an epoxy resin obtained by reacting bisphenol F with an epoxidizing agent (such as epichlorohydrin).

Bisphenol F epoxy resin can be seen as a 'high-performance upgrade' of bisphenol A epoxy resin, mainly to address the limitations of BPA resin in certain applications (especially viscosity and heat resistance). BPF is generally more expensive, but it is irreplaceable in applications requiring excellent processability, high crosslinking density, and chemical resistance.

The gross profit margin in this industry is around 30%.
