A Industrial Print and Apply Labelling system is a type of automatic labelling system that is used to apply labels to various product packages, containers, cartons, or products. The labelling machine is designed to print product information or barcode data onto self-adhesive labels and then apply them to the products. The machine comprises a printer mechanism, which prints the shipping or other product details, and an applicator mechanism that applies the label to the product. These machines can be integrated into the packaging line or production processes to automatically apply labels to products. Print and apply labelling machines are widely used across various industries, including food and beverage, pharmaceutical, and logistics, to improve productivity and efficiency in labelling and packaging operations.

This report studies Print and Apply Labelling machines and Consumables.

The global key manufacturers of Print and Apply Labeling systems include Markem-Imaje, Videojet, Domino, Cotaio, Weber Packaging Solutions, Arca Etichette, Pro Mach, CAB, Evolabel, Novexx, etc.

Major Applications:

The Print and Apply Labeling finds applications across various sectors, with the

following being the most prominent:

**Food and Beverage:** This sector represents the largest application area for labelling machines, driven by the need for compliance with food safety regulations and accurate product information. The demand for traceability and enhanced branding has further accelerated the adoption of automated labelling solutions.
