An injectable bone graft refers to a biomaterial that can be delivered in a fluid or paste-like form directly into a surgical site, typically to promote bone regeneration or fusion. These grafts are often used in orthopedic and dental procedures where there is a need to fill voids, defects, or gaps in bone tissue. Injectable bone grafts can contain various components such as ceramics, polymers, growth factors, or bone-derived materials that facilitate new bone formation and integration with existing bone structures. Their injectable nature allows surgeons to precisely place the graft material into complex or minimally invasive surgical sites, enhancing surgical outcomes and patient recovery. Global key players of Injectable Bone Graft include Medtronic, DePuy Synthes, Baxter, Stryker (Wright Medical), BONESUPPORT, etc. The top five players hold a share about 60%. North America is the largest market, and has a share about 74%, followed by Europe and Asia-Pacific with share 18% and 5%, separately. In terms of product type, Synthetic is the largest segment, accounting for a share of 77%. In terms of application, Hospital is the largest field with a share about 66 percent.
