## Abstracts

According to our (Global Info Research) latest study, the global Instant Sodium Silicate Powder market size was valued at US\$ 663 million in 2025 and is forecast to a readjusted size of US\$ 837 million by 2032 with a CAGR of 3.3% during review period.

Instant sodium silicate powder is a free-flowing, white to off-white powdered form of sodium silicate produced through spray drying or granulation processes. It is designed to dissolve rapidly in water at ambient temperature, providing excellent dispersibility and convenience in handling. The product offers adjustable modulus and alkalinity to meet different formulation requirements. Due to its fast solubility and consistent performance, instant sodium silicate powder is widely used in detergents, paper making, construction materials, refractories, foundry applications, coatings, and various chemical processing industries where efficient dissolution and precise control are required.

In 2025, global production of Instant Sodium Silicate Powder reached 1.769 million tons, with an average selling price of US\$364 per ton. Production capacity was approximately 5 million tons, and the industry's gross profit margin was approximately 5%–15%. Cost structure: Direct materials accounted for approximately 72%, manufacturing costs approximately 21%, and labor costs approximately 7%. Industry chain: Upstream sectors include silica sand, caustic soda (sodium hydroxide), chemical additives, and energy; downstream sectors include detergents, papermaking, building materials, refractory materials, casting, and coatings.
