According to our latest research, the global Insulin Pump and Supplies market size will reach USD million in 2031, growing at a CAGR of %over the analysis period.

An insulin pump is a small, computerized device used to manage diabetes by delivering a continuous supply of insulin to the body. It mimics the insulin release of a healthy pancreas, providing a steady flow of insulin through a small, flexible tube that is inserted under the skin. The pump allows for precise control of insulin dosage and can be programmed to adjust the amount delivered based on the individual's needs throughout the day. Essential supplies for insulin pump use include the pump itself, insulin cartridges or reservoirs, infusion sets (tubing and cannulas), and a blood glucose meter for monitoring glucose levels. These components work together to help individuals maintain stable blood glucose levels and effectively manage their diabetes.
