According to our (Global Info Research) latest study, the global Insurance Industry Security Awareness Training Solutions market size was valued at US\$ 542 million in 2025 and is forecast to a readjusted size of US\$ 806 million by 2032 with a CAGR of 5.8% during review period.

The insurance industry safety awareness training solution is a series of training activities designed for insurance industry practitioners, aiming to enhance employees' safety awareness, enable them to identify and respond to potential safety risks, and ensure safety and harmony in the workplace. The insurance industry safety awareness training solution combines industry characteristics with safety management needs. Through systematic training activities, employees can master basic safety knowledge and skills, become familiar with and comply with job safety operating procedures, and effectively respond to various emergencies. This solution aims to build a safe and healthy working environment, protect the lives of employees, and maintain the stable development of the enterprise. The industry's gross profit margin is approximately 40-60%.

Market drivers primarily include:

Policy compliance and strengthened industry regulation: Global insurance regulators are continuously upgrading regulations on data security and customer privacy protection (such as the EU's GDPR and China's Personal Information Protection Law), forcing companies to meet compliance requirements through training. The China Banking and Insurance Regulatory Commission (CBIRC) is promoting a 'special rectification campaign for safety production in the insurance industry,' explicitly requiring the

inclusion of safety training in employee performance evaluations, forming a virtuous cycle of 'policy-driven - corporate response - market expansion.'

Technological iteration and evolving risk patterns: Digital transformation accelerates the online transformation of insurance business, but risks such as cyberattacks (e.g., DDoS, phishing scams) and internal data breaches are surging. With the application of AI technology in underwriting and claims processing, algorithmic bias and model vulnerabilities have become new risk points, driving the upgrade of training content from 'basic security' to 'intelligent risk prevention and control,' creating demand for high-end solutions.

Increased business needs and user awareness: Insurance companies are placing higher demands on business continuity, requiring training to mitigate risks such as claims disputes caused by operational errors and business interruptions caused by system failures; consumers are becoming more sensitive to data security, forcing companies to strengthen employee compliance awareness through training and maintain brand reputation; the penetration of emerging fields (such as internet insurance and health insurance) creates a dual demand of 'upgrading traditional business + expanding into new scenarios,' which will support long-term industry growth.
