Integrated microwave components such as attenuators, switches, oscillators, amplifiers, filters, couplers, and mixers with associated electronic circuits into one monolithic assembly.

Gallium Nitride (GaN) is an emerging alternative to pure silicon in semiconductors and electronics due to its high brightness emission and intensity, high power efficiency, high frequency handling capability, and flexibility to work with various materials in optoelectronic semiconductors. Substrates such as silicon, sapphire and silicon carbide (SiC). Gallium nitride is a hard and mechanically stable semiconductor material with a wide bandgap, high heat capacity and thermal conductivity. As 5G continues to evolve, adoption of silicon-based GaN RF devices is expected to increase across verticals such as communications, military & defense, and radar. GaN provides efficient long-range communications and saves energy. Rising defense spending globally to design advanced warfare equipment, including secure communication products and military radars, is expected to drive the growth of the integrated microwave assembly industry. Likewise, with technological advancements and rapid growth in 5G applications, the demand for RF modules based on integrated microwave components has increased significantly, creating lucrative opportunities for market players, increasing demand for medical instruments equipped with microwave equipment, Growing demand for improved communication services to facilitate growth is boosting the growth of the market.
