Abstracts

According to our (Global Info Research) latest study, the global Interventional Radiology Navigation System market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Precise image guidance is critical to the success of interventional radiologic and oncologic procedures. Frequently, these procedures are technically challenging due to poor target visualization, small size, or the proximity of vulnerable regional anatomy. Navigational tools can enhance the interventionalist's precision by improving localization of interventional devices in relation to the target, analogous to navigating a car to its destination using global positioning systems (GPS).
