## Abstracts

According to our (Global Info Research) latest study, the global Iodinated Pyridines market size was valued at US\$ 30.99 million in 2025 and is forecast to a readjusted size of US\$ 48.85 million by 2032 with a CAGR of 6.6% during review period.

Iodinated pyridines are a family of nitrogen-containing heteroaromatic compounds derived from pyridine, in which one or more ring hydrogen atoms are replaced by iodine. Iodinated pyridines are widely used as versatile building blocks and key intermediates in the synthesis of pharmaceuticals, agrochemicals, specialty chemicals and functional materials.

Upstream, iodinated pyridines are mainly prepared from pyridine or aminopyridines through iodination, diazotization–iodination, or direct C–H iodination strategies. Downstream, iodinated pyridines function as highly reactive heteroaryl iodide building blocks and key intermediates in several value chains.

In 2025, global sales of iodinated pyridines reached approximately 1,255 tons, with an average global market price of around US\$ 24/kg. Production capacity varies significantly among manufacturers, with gross profit margins ranging from approximately 20% to 50%.
