Abstracts

According to our (Global Info Research) latest study, the global Iron Light Pole market size was valued at US\$ 2198 million in 2025 and is forecast to a readjusted size of US\$ 2982 million by 2032 with a CAGR of 4.4% during review period.

Iron light poles usually refer to outdoor lighting support poles made of carbon steel or low-alloy steel as the main material. They are generally rolled and welded from steel plates into tapered or polygonal poles. The corrosion resistance is improved through surface treatments such as hot-dip galvanizing and spraying. They are used for the installation and carrying of lighting fixtures in roads, parks, squares, parking lots, etc. Iron street light poles are made of Q235 steel and hot-dip galvanized for anti-corrosion treatment, with a lifespan of up to 30 years. The cost is low and cost-effective. Currently, most of our countries use this kind of light pole. In 2025, global Iron Light Pole production reached approximately 4,716 K Units, with an average global market price of around US\$ 453 per unit.

The annual production capacity of iron lamp poles is 6,000 K Units, with a gross profit margin of about 15%.

The upstream mainly includes steel and surface treatment materials and manufacturing consumables. The core includes hot-rolled coils and steel pipes, steel plates for flanges and connectors, welding wire flux, zinc ingots and fluxes for hot-dip galvanizing, powder coatings or paints for spraying, fastener steel for embedded parts and anchor bolts, as well as packaging consumables and logistics services. Among them, price fluctuations of steel and zinc are the most sensitive to cost transmission. Downstream are mainly municipal and transportation infrastructure construction units, general contractors of street lighting and smart lighting projects, park and commercial real estate developers,

operators of ports, airports and large parking lots, as well as street lighting manufacturers and smart lighting system integrators. Typical demand comes from road construction and reconstruction, smart street lighting upgrades, high pole lighting and landscape lighting projects.

Material costs usually account for about 65% to 78% of the total cost, of which steel accounts for about 45% to 60%, galvanizing zinc consumption and galvanizing processing account for about 10% to 18%, coating materials account for about 3% to 6%, fasteners and embedded parts account for about 4% to 8%; manufacturing costs usually account for 12% to 20%, and others account for 5% to 12%.
